

Mark and Verify System

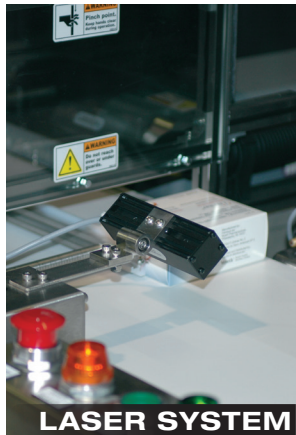

Acquire's Marking and Verification System is now available for printing on bottles, cartons, cases, and more. The system controls all printing, alarming, conveying, and inspection on a single easy to use interface.

Our standard marking and verification system is a completely integrated system for easy product set-up, inspection, and control. The system is designed for medium speed marking applications (20 - 400 parts/minute). The system is track and trace ready and can be easily integrated for serializing of products and communication to our Tracer system.

INK JET SYSTEM

LASER SYSTEM

SYSTEM FEATURES
