

Tracer

Acquire's Tracer System is an expansive platform that offers a complete track and trace package to meet current and future ePedigree and track and trace regulations. The system can also quarantine product for food and beverage applications.

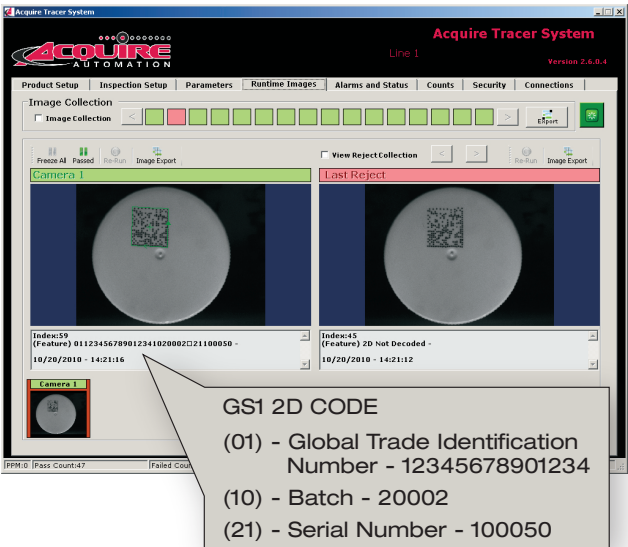

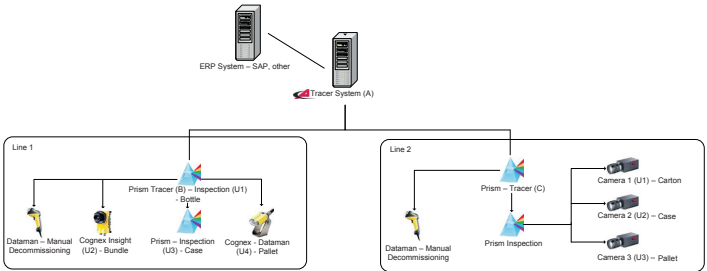

Product tracking and traceability is becoming ever more important for our packaging clients. Acquire's Prism system has been expanded to offer a complete track and trace package.

The system is capable of tracking products at the unit level following GS1 barcode standards. The system can also grade codes and quarantine product based upon production time and date; allowing customers to quickly reconcile products on their packaging line.

Production time and date tracking can be utilized to quarantine food products during quality audits and other scenarios that may require segregation of products within the same or differing batches.

Acquire Tracer System Architecture

SYSTEM FEATURES

- Ability to interface to Enterprise systems such as SAP
- GigE camera technology for multiple inspection stations from single system
- 21 CFR Part 11 Compliant
- Code verification and grading
